

ACADEMY FOR REINTEGRATION OF MARGINALIZED PERSONS

During the past thirty years of transition, crisis upon crisis, despite the enormous efforts made by state institutions and the NGOs, the inclusion of people at social risk still remains absent in the labor market. We draw our motivation from this situation, convinced that by implementing and realizing of the goals of this project we can become a driving force, trend and response to address the negative impacts of the recurring crisis due to enormous social differences, and offer a broader human vision of inclusive strategy for sustainable development of people with disabilities and other socially excluded and stigmatized groups.

The Centre for development of the South-East planning region in collaboration with the Association IZBOR, within the implementation of this project will provide improvement of the existing opportunities in the region for better inclusion of the marginalized persons in the labor market.

By the implementation of the project will be purchased equipment for enrichment of the existing reintegration program for marginalized persons, which includes a series of training activities in the field of organic production, gardening, floriculture, herbalism, bakery, packaging and labeling of grain and powder products.

The provision of such equipment will provide continuous support for development of the innovative services for social inclusion and equal access to quality job positions of the marginalized persons which are in disadvantaged socio-economic conditions, by acquiring skills for organic production, bakery skills, skills related to drying and packaging of agricultural products and other skills that will be identified as a need on the labor market in the region.
